

Continuation of Substance of Interview including description of the general nature of what was discussed: to insert "and exceeds a diameter of said second configuration" since the amdt filed 9/5/07 inserting limitations to the sheath and the first configuration having a diameter that exceeds a diameter of the sheath passageway are only directed to relative dimensions since the sheath could be any size or shape. The prior art used in the previous rejection did not have a first configuration that has a diameter that exceeds a diameter of the second configuration and the rest of the amended limitations. The examiners amdt has support in the original specification such as figures 40 and 46 and corresponding specification description that describes the straight configuration and coiled configuration.
